

Greater school safety – and immediate cost savings.
Network video solutions for education.

Turning challenges into possibilities

Far too often we hear about educational facilities that have been exposed to vandalism, violence or burglary. As a result, valuable resources are lost to cumbersome repairs and investigations. A network video solution from Axis enables you to stay focused on your core business – education.

With Axis you get a future-proof and cost-efficient tool to:

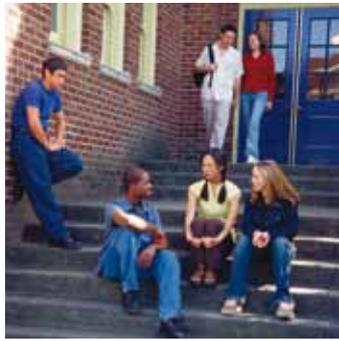

- > Increase the security for students and staff
- > Prevent violence and theft
- > Minimize the costs for vandalism
- > Investigate incidents and identify suspects
- > Save time and manpower

In addition, an Axis IP-Surveillance system has the advantage of being highly cost-effective: installation costs are low since the need for dedicated cables is vastly reduced and the system can be run on existing computers.

Reliable systems for school safety and security

Students and teachers hampered by the threat of harassment or violence will be comforted by the presence of reliable network cameras in the school's public spaces. This includes external areas such as walkways between buildings as well as internal areas such as restaurants and corridors. Outside school hours, the same

surveillance system can be used to remotely monitor school property and deter vandalism. A sophisticated, built-in motion detection system can generate an alarm, which automatically transmits images to your security operators giving them accurate, up-to-the-minute information upon which to base their decisions.

Cost-efficient, scalable and future-proof

Axis network video products are based on open IP standards and deliver high-quality video. Axis cameras run on your existing IT infrastructure, and they are powered over the same network cable that transfers the video. This minimizes your installation costs, and makes it easy to add new cameras to your system, or relocate available cameras. With Axis, you also benefit from a wide range of outdoor-ready cameras, which are delivered in weather-proof housings to facilitate installation and ensure full functionality at all times.

A proven solution for schools worldwide

Axis surveillance solutions have been installed in educational institutions all over the world. The Newport School in the UK deployed an Axis solution and won an award for "Best use of technology in Government, Wales" and was named "Security client of the year". In Australia, the Swinburne University of Technology built a large Axis network video system using existing IP networks, and experienced a great quality improvement compared to analog CCTV. And when Eastchester Union Free School District in New York, USA, installed Axis network cameras they achieved savings of thousands of dollars already during the first year, by drastically reducing theft and vandalism. Those are just some examples. With Axis' proven track record, you can feel confident that we will create the right solution and have the right products to achieve your school surveillance ambitions whatever they may be.

Why network video?

- > Superior image quality
- > Remote accessibility
- > Easy, future-proof integration
- > Scalability and flexibility
- > Cost-effectiveness
- > Distributed intelligence
- > Proven technology

Why Axis?

- > Worldwide #1 in network video, the world's leading expert
- > Proven installations across all continents
- > Broadest product portfolio in the industry
- > The largest installed base of network video products
- > Over 25 years of networking excellence
